

## PT-260-PC

### STICKIES CONTROL AGENT

#### DESCRIPTION:

PT-260-PC is a proprietary blend of polymers. It is supplied as a clear, low viscosity liquid. PT-260-PC performs well over a pH range of 3.0 – 10.0.

#### APPLICATION:

PT-260-PC is a blend of organic polymers designed to control deposition of stickies on paper machines. PT-260-PC may be applied via showers to control stickies deposits on rolls and/or on suction box covers.

PT-260-PC should be metered by a positive displacement pump into the water supply to the appropriate shower(s). Normally, this will be the puddling shower on a roll or the lube shower ahead of a suction box. A static mixer in the shower water line downstream from the point of addition is recommended. The dosage of PC-160 will be from 0.5 – 5.0 ml/min per foot of machine width, depending on the severity of the problem.

#### Typical Properties

Appearance.....	Clear Liquid
Density @ 77° F.....	8.7 lbs/gallon
Activity.....	16%

#### STORAGE AND HANDLING:

PT-260-PC should be stored in corrosion resistant containers at 40-100° F. In case of skin contact, flush with water. In case of eye contact, flush with water and seek medical attention. The shelf life of PT-260-PC is at least six months.
